

Terra Design-Build

Guest Loft

This project was to build out an above-garage space so that extended family would have a place to stay. They wanted to build out two bedrooms and a full bath. Pocket doors were used to increase useable space. New windows were added for each bedroom, and two skylights on the north side were added. We were able to add a small balcony for reading, using a repurposed beam. The bathroom has sinks at two different levels, one is lower for the grandkids! This was an especially welcome retreat during the pandemic.
